2.5 Scope of Work:

The work majorly involves carrying out detailed geotechnical investigations by means of Exploratory Boreholes and Dynamic Cone Penetration Tests for calculation of Soil Bearing Capacity (SBC) and recommendation of foundation design of proposed Stations & Towers.

The scope of work for ascertaining the ground soil properties include;

- Drilling of about 6 Boreholes of depths up to 12 m depth (at specified locations) -(as per site condition) in all types of soil and in case of integrated solid rock boring has to be done up to the depth of 8m-10 m (As per site condition) from the existing ground surface, to determine the in-situ engineering properties.
- Conducting Standard Penetration test (SPT) at every 1.5 m interval starting from first sample at 1.5 m depth or at the change of stratum as per **IS:2131**.
- Collection of Undisturbed soil samples at 3 m interval alternatively with conduction of SPT, disturbed soil samples as per **IS:2132**.

- Preparation of bore logs and location plan of boreholes (with coordinates) on computer by using suitable software.
- Submission of detailed strata for the conducted borehole.

Lab testing soil sample

- Moisture Content/Dry density
- Atterberg limit
- Grain size analysis including hydrometer
- Triaxial/Direct Shear test
- Consolidation test
- Any Other Test Required

Lab testing Rock sample

- UCS
- Point Load
- Density
- Any Other Test Required

Carry out suitable laboratory tests on collected soil and rock samples for getting accurate shear strength parameters (C & ϕ)

- Laboratory Tests on representative samples (Rock & Soil) like Direct Shear Test, Triaxial Shear Test, Unconfined compression test, Point Load Test, sieve analysis and any other test necessary as per requirement.
- Analysis and interpretation of the test results, and drafting of report with recommendations clearly mentioning type of foundation suitable and safe soil bearing capacity.

These specifications cover the technical requirement for a detailed geotechnical investigation for submission in the form of Geotechnical Report. The detailed geotechnical investigations shall be carried out to provide the designer with sufficiently accurate information; both general and specific, about the substrata profile and relevant soil and rock parameters at site. The objective of the investigations is to formulate the basis for rational design of civil structure or passenger terminal with dynamic/moving load. In addition to foundation recommendation, the calculation of Soil Bearing Capacity along with all shear parameters are required to be detailed in the Report.

**NOTE: ALL LAB TESTS ARE TO BE DONE AT NABL ACCREDITED LABORATORY ONLY
BORING**

i. General requirements

- Boreholes shall be taken at specified locations to obtain information about the sub-soil profile, its nature and strength and to collect soil samples for strata identification and conducting laboratory tests. The minimum diameter of the bore shall be 150 mm and boring shall be carried out in accordance with the provisions of IS:1892 as per this specification.
- All bore holes shall extend up to depths as directed by engineer. If strata with SPT N value greater than 100 with characteristics of rock met with, prior to the specified depth, the bore hole shall be advanced further by chiseling. Chiseling shall be continued for max depth of 20cm or up to 2 hours whichever is earlier. During chiseling rock fragments shall be collected. Identification of rock strata shall be on the basis of visual examination of SPT sample and rock fragments. After it is established that rock is met with, borehole shall be advanced further by drilling in rock and core shall be collected. When the bore hole is terminated in soil strata, an additional SPT test shall be carried out at the termination depth.

- c) Casing pipe shall be used in the borehole to support its side fall is suspected to occur inside the borehole. When casing pipe is used, it shall be ensured that its bottom end is at all times less than 15cm above the bottom of the borehole and not below the level at which the test has to be conducted or sampling has to be done. In case of cohesion less soil advancement of the casing pipe shall be such that it does not disturb the soil to be tested of sampled. The casing shall be advanced by slowly turning the casing pipe and not by driving.
- d) In-situ tests shall be conducted or undisturbed samples shall be collected in the bore holes at regular intervals and at change of strata or as decided by the engineer. Representative disturbed samples shall be preserved for conducting various identification tests in the laboratory. Water table in the borehole shall be carefully recorded and reported. No water/drilling mud shall be added while boring above the ground water table. For cohesion less soil below the water table, the water level in the bore hole shall at all times be maintained slightly above the water table.
- e) The bore shall be cleaned by using the suitable tools up to the depth of testing or sampling, ensuring that there is minimum disturbance of soil at the bottom of the bore hole. The process of jetting through an open tube sampler shall not be permitted. In cohesive soil bore hole may be cleaned using a bailer with a flap valve. Gentle circulation of drilling fluid shall be done when rotary mud circulation boring is adopted.
- f) On completion of bore hole included boreholes in which special tests are conducted contractor shall backfill all boreholes as directed by the engineer.
- g) In sandy and non-cohesive strata soil samples shall be collected with due care that the samples collected truly represents the strata and is not vitiated in any way by washing out of fines.

The no boreholes/ DCPT tests may be increased or decreased based on requirement of WAPCOS and the payment shall be made as per rate quoted.

2.6 Earnest Money Deposit (EMD):

The EMD & Tender Processing Fee shall be submitted as per the details mentioned in the NIT. The bids without Tender Processing Fee and/or Bid Security shall be summarily rejected and shall not be evaluated further.
